Recommendations : For Botium Toys' security, I recommend that you adjust privacy policies, adapting your password policies to the policies recommended by NIST CSF, using passwords with at least 8 numbers, 1 minor letter, 1 major letter and 1 special symbol, guarantee that only people authorized and have access to some data, example: your physical seller don't need to know the credit card number for your customer. You should also implement encryption in your system, to have more security in your customers data. Install IDS software to detect if someone out of your network gets access to your data and the most important, start doing backup to prevent loss data about any incident.
